Serial No.: Unassigned

Preliminary dated November 26, 2003

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the

Docket No.: ESEC-P171US-D1

application.

Listing of Claims:

1-20 (Cancelled)

21. (New) A Device for the metered delivery of a viscous liquid, comprising:

a first and second piston consisting of a selected one of hard metal or tool steel,

a pump body comprising a first sleeve consisting of a selected one of hard metal or

ceramic and having a first drill hole accommodating the pistons as well as two further drill holes

which run orthogonally to the first drill hole and one end of which opens out into the first drill

hole and the other end of which opens out into an intake chamber or a discharge chamber in the

pump body, and

a drive mechanism for moving the pistons back and forth such that a width of a slit

formed between the pistons varies during the back and forth movement.

22. (New) The device according to claim 21, the pump body further including two blind

holes, wherein ends of the drill hole of the first sleeve open out into the blind holes.

23. (New) The device according to claim 21, wherein the first sleeve and the pump body

consist of one piece of material.

24. (New) The device according to claim 22, wherein the first sleeve and the pump body

consist of one piece of material.

3

Serial No.: Unassigned Docket No.: ESEC-P171US-D1

Preliminary dated November 26, 2003

25. (New) The device according to claim 21, the pump body further comprising two bearings

in each of which a second or third sleeve, respectively, is movably supported, whereby an end of

the first piston is secured in the second sleeve and an end of the second piston is secured in the

third sleeve, the second and third sleeve forming part of the drive mechanism.

26. (New) The device according to claim 22, the pump body further comprising two bearings

in each of which a second or third sleeve, respectively, is movably supported, whereby an end of

the first piston is secured in the second sleeve and an end of the second piston is secured in the

third sleeve, the second and third sleeve forming part of the drive mechanism.

27. (New) The device according to claim 21, wherein a radius of the first drill hole is

manufactured within a tolerance of $\pm 0.5 \, \mu m$ and a radius of the pistons with a tolerance

of $\pm 0.15 \mu m$.

28. (New) The device according to claim 22, wherein a radius of the first drill hole is

manufactured within a tolerance of $\pm 0.5 \mu m$ and a radius of the pistons with a tolerance

of $\pm 0.15 \,\mu m$.

29. (New) The device according to claim 23, wherein a radius of the first drill hole is

manufactured within a tolerance of $\pm 0.5 \mu m$ and a radius of the pistons with a tolerance

of $\pm 0.15 \mu m$.

30. (New) The device according to claim 24, wherein a radius of the first drill hole is

manufactured within a tolerance of $\pm 0.5 \mu m$ and a radius of the pistons with a tolerance

of $\pm 0.15 \, \mu m$.

4

Serial No.: Unassigned

Preliminary dated November 26, 2003

31. (New) The device according to claim 25, wherein a radius of the first drill hole is

Docket No.: ESEC-P171US-D1

manufactured within a tolerance of $\pm 0.5 \mu m$ and a radius of the pistons with a tolerance

of $\pm 0.15 \, \mu m$.

32. (New) Use of the device according to claim 21 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

33. (New) Use of the device according to claim 22 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

34. (New) Use of the device according to claim 23 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

35. (New) Use of the device according to claim 24 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

36. (New) Use of the device according to claim 25 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

37. (New) Use of the device according to claim 26 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

38. (New) Use of the device according to claim 27 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

39. (New) Use of the device according to claim 28 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.

5

Serial No.: Unassigned

Preliminary dated November 26, 2003

40. (New) Use of the device according to claim 29 on a writing head for the application of

adhesive onto a substrate which is to be equipped with a semiconductor chip.
